Digital Literacy Project Report

Course Code: CSE0001
Course Title: Digital Literacy

Name: Aditya Raman
Registration Number: 25BCE10048
Branch: B.Tech (Computer Science Core)
Year: 1st Year

Institution: VIT Bhopal University
Date: 31 March, 2026

Introduction

This project is based on the concept of digital literacy and its importance in today's world. As a Student Digital Ambassador, the objective of this project is to understand and apply essential digital skills required for academic and professional growth. The project consists of five tasks, including creating an infographic, building a digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and learning about cybercrime awareness.

Through these tasks, I gained practical knowledge about various digital tools and platforms. This project also helped me develop responsible online behavior and effective communication skills. Overall, it provided a strong foundation for using digital technologies in a safe, productive, and professional manner.

Task 1 : Digital Literacy Infographics

I created a digital literacy awareness infographic using **Canva**. The infographic highlights key aspects of digital literacy, including safe internet practices, useful digital tools for students, and maintaining a professional online presence. I focused on making the design simple, visually appealing, and easy to understand for students.

The infographic includes sections explaining what digital literacy means and why it is important in daily academic life. It also provides tips on using the internet safely and responsibly. I used icons, colors, and short text to make the content engaging and clear.

While creating the infographic, I found it interesting to explore different design templates and features available in Canva. However, arranging all the information in a single page without overcrowding it was slightly challenging. This task helped me improve my creativity and taught me how to present information effectively in a visual format.

Task 2 : Digital Portfolio

I created and updated my profiles on GitHub, LinkedIn, and Kaggle. Each platform serves a different purpose in building a professional digital presence.

GitHub is used to showcase projects and coding work, which will help me build a strong portfolio over time. LinkedIn is a professional networking platform where I can connect with industry professionals and explore career opportunities. Kaggle is useful for learning data science and participating in competitions.

Through this task, I understood the importance of maintaining a professional online identity. In the next four years, I plan to regularly update my GitHub with projects, stay active on LinkedIn for networking, and use Kaggle to improve my technical skills. This will help me in internships and placements in the future.

Task 3 : Coding and Collaboration platform

I explored both coding and collaboration platforms. For coding practice, I used **HackerRank** and completed a beginner-level problem. This helped me understand basic programming concepts and improve my logical thinking skills.

For collaboration, I created a quiz using **Google Forms**. The quiz consisted of five questions related to digital literacy, including both multiple-choice and short-answer questions. I also connected it to Google Sheets to automatically collect and analyse responses.

This task helped me understand how these platforms can be used in academics. HackerRank will help me practise coding regularly, while Google Forms will be useful for creating quizzes, surveys, and collecting data. Overall, this task improved my practical knowledge of digital tools.

Task 4 : Email Etiquette and Social Media

In digital communication, poor email etiquette can create misunderstandings and leave a negative impression. For example, sending an email without a subject line or using informal language when writing to a professor may appear unprofessional. This can lead to delayed responses or miscommunication.

Such situations can be avoided by following proper email etiquette, including writing a clear subject line, using polite language, and maintaining a structured format. It is also important to use appropriate greetings and sign-offs.

Through this task, I learned that professional communication is essential in both academic and professional environments. Even small mistakes in emails can have significant consequences, so it is important to communicate clearly and respectfully.

Task 5 : Ransomware

While researching ransomware, I was surprised to learn how quickly such attacks can spread and cause large-scale damage, as seen in real-world incidents. Many users become victims simply because they are unaware of basic cybersecurity practices.

This task made me realize the importance of being cautious while using the internet. One habit I will change is that I will avoid downloading files from untrusted sources and will always keep my system updated. I will also make sure to regularly back up my important data.

Overall, this task increased my awareness of cyber threats and taught me that simple precautions can prevent serious problems.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to use different digital tools, create a professional online presence, and communicate effectively. It also made me aware of online safety and cyber threats.

Each task provided practical knowledge that will be useful in my academic and professional journey. From designing an infographic to exploring coding platforms and learning email etiquette, every activity contributed to my overall learning.

Overall, this project enhanced my digital skills and prepared me to use technology responsibly and efficiently in the future.
