Digital Literacy Project Report

Course Code: CSE0001

Course Title: Digital Literacy

Name: Gaurav Kumar

Registration Number: 25BCE11389

Branch: B.Tech (Computer Science Core)

Year: 1st Year

Institution: VIT Bhopal University

Date: 31 March, 2026

Introduction: -

This project focuses on understanding digital literacy and its relevance in modern life. As a Student Digital Ambassador, the aim was to learn and apply important digital skills needed for both academic and career development. The project included five major activities such as designing an infographic, creating a digital portfolio, exploring coding and collaboration tools, learning professional email practices, and studying cybercrime awareness.

Through these tasks, I developed hands-on experience with different digital platforms and tools. The project also encouraged responsible internet usage and improved my communication abilities. Overall, it helped me build a solid base for using digital technologies effectively, safely, and professionally.

Task 1: Digital Literacy Infographic:-

For this task, I designed an awareness infographic using Canva. The main goal was to present key elements of digital literacy such as online safety, useful tools for students, and maintaining a professional digital identity. I ensured the design was simple, visually attractive, and easy to understand.

The infographic explains the concept of digital literacy and its importance in everyday academic activities. It also highlights safe browsing habits and responsible internet usage. I used icons, colors, and brief text to make the content engaging.

While working on this, I enjoyed exploring Canva's features and templates. However, fitting all the information neatly into one page without cluttering it was a bit difficult. This task enhanced my creativity and improved my ability to present information visually.

Task 2: Digital Portfolio

In this task, I created and improved my profiles on GitHub, LinkedIn, and Kaggle. Each platform plays an important role in building a professional presence online.

GitHub helps in showcasing coding projects, LinkedIn is useful for professional networking, and Kaggle supports learning in data science and competitions.

I realized the importance of maintaining a strong digital identity. Over the next few years, I plan to regularly update my GitHub with projects, stay active on LinkedIn for networking, and use Kaggle to enhance my technical skills. This will support my future internships and career opportunities.

Task 3: Coding and Collaboration Platforms

I explored both coding and collaboration tools during this task. I practiced programming on HackerRank by solving a beginner-level problem, which helped me strengthen my logical thinking and basic coding skills.

For collaboration, I created a quiz using Google Forms with five questions related to digital literacy. The responses were automatically collected and analyzed using Google Sheets.

This task showed me how these tools can be applied in academics. HackerRank will help me practice coding regularly, while Google Forms can be used for surveys and quizzes. Overall, it improved my practical understanding of digital platforms.

Task 4: Email Etiquette and Social Media:-

This task focused on the importance of proper communication in digital platforms. Poor email practices, such as missing subject lines or using informal language, can create misunderstandings and appear unprofessional.

To avoid such issues, it is important to write clear subject lines, use polite language, and follow a proper structure. Greetings and sign-offs should also be appropriate.

I learned that professional communication is very important in both academic and work environments. Even small mistakes can affect how a message is perceived, so clarity and respect are essential.

Task 5: Ransomware Awareness:-

While studying ransomware, I was surprised by how quickly such cyberattacks can spread and cause serious damage. Many people become victims due to a lack of awareness about basic cybersecurity measures.

This task helped me understand the importance of safe internet practices. I will avoid downloading files from unknown sources, keep my system updated, and regularly back up important data.

It increased my awareness of cyber threats and showed that simple precautions can prevent major problems.

Conclusion

This project gave me a clear understanding of digital literacy and its significance in today's world. I learned how to use various digital tools, maintain a professional online presence, and communicate effectively. It also increased my awareness about online safety and cyber risks.

Each task contributed valuable knowledge that will benefit me in my academic and professional journey. Overall, this project strengthened my digital skills and prepared me to use technology responsibly and efficiently in the future.
